Numerical Methods

Homework #12
Due Feb. 25, 2026

1. 6.4 [Postprocessing for scattering amplitudes]
2. 6.5 [Polyarc mesher]

If you wish, for this problem you can implement a different approach to mesh generation than the simple polyarc method. For later assignments, you will need a way to create shapes that can be adjusted by changing parameter values (i.e, a parametric mesh generator). There are many ways to do this.
